

Forty Cube Toss

Aim of the game:

To move your coloured counter around the board with the least dice rolls as possible

Equipment needed:

- Coloured counters
- Flat surface
- X2 dice
- Board

How to play:

Step 1- To decide who starts

Who ever rolls the dice with the lowest number of dots goes first

Step 2- Begin the game

- a) The first person gently rolls the dice, the amount of dots added together is how many cubes they move their coloured counter carefully around the board.
- b) Immediately after the next person with the lowest number on their dice takes their turn and completes step a) again.
- c) Continue step a) until all players have had a turn.

Other points:

If you roll a double six you get another roll. If you roll a double one you unfortunately have to miss a go.

To win the game

You must land exactly on the 40 cube to win the game.

You must roll the exact number to land on the forty cube, if you roll over the forty you must continue around the board again.

Happy playing, enjoy the game :]
