

Science Activity w.c. 22nd June

Go back to the clip from last week, starting from 46 seconds and follow the instructions:

<https://www.youtube.com/watch?v=rYQ7ZIG7wQk>

Stop at 1:07. Observe the eggs.

Which liquids did the least damage to the egg shells?

Did the eggshell protect the egg a bit like the enamel on our tooth protects the living part inside?

Cut eggs open to examine what has happened inside.

Continue to watch the clip. The clip will tell you what happened to the eggs and why the egg shells are similar to our teeth.

Was your prediction from last week correct?

Your Task:

Create a persuasive poster trying to persuade other children not to drink the liquids which cause the most damage to teeth as identified in the investigation.
