**Pairs**  
YOU NEED  
one Multilink cube and 6 counters in different colours for each child; and two 1-6 dice

**TO PLAY** Take turns to throw the dice and add the two numbers together. Count socks to see how many pairs you can make from that number. Cover that number on your line of circles. An odd total will produce an odd sock. Put the Multilink cube on your odd sock in the bushes, when another odd total is thrown, an extra pair can be made using the odd sock. Who can cover all their circle numbers first?
