

Friday 26<sup>th</sup> February 2021

Let's get warmed up and practise counting to 20.

[Count And Move \(HD\) | Super Simple Songs - YouTube](#)

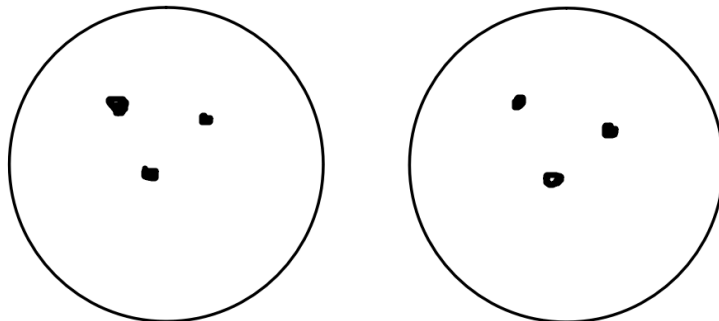

We have spent the last couple of days sharing practically with biscuits and eggs and other things at home. Today we are going to continue to share by drawing pictures to help us find out the answer.

What is 6 shared by 2?

I could answer this by drawing two circles in which to share out my 6 and then drawing 6 dots in the circles. Below I have shared them equally between the circles just like we did with the dinosaur eggs and biscuits.

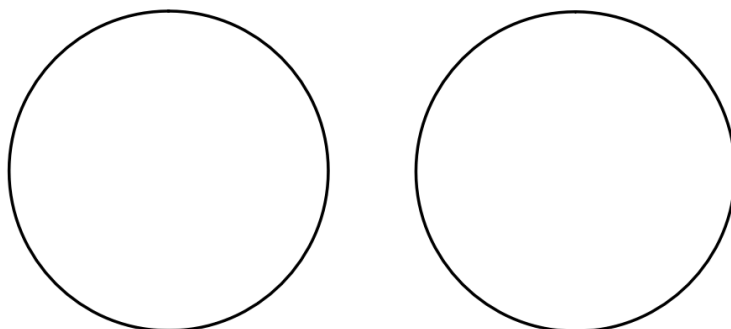

6 shared by 2 is

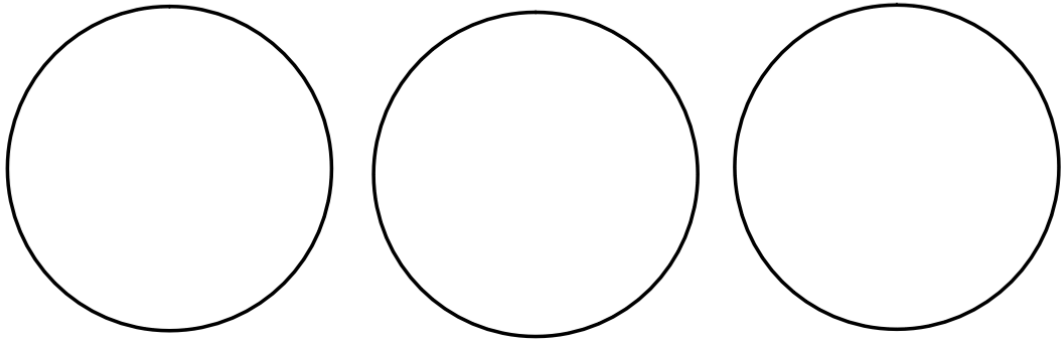

6 shared by 2 is 3!

Have a go at the following...

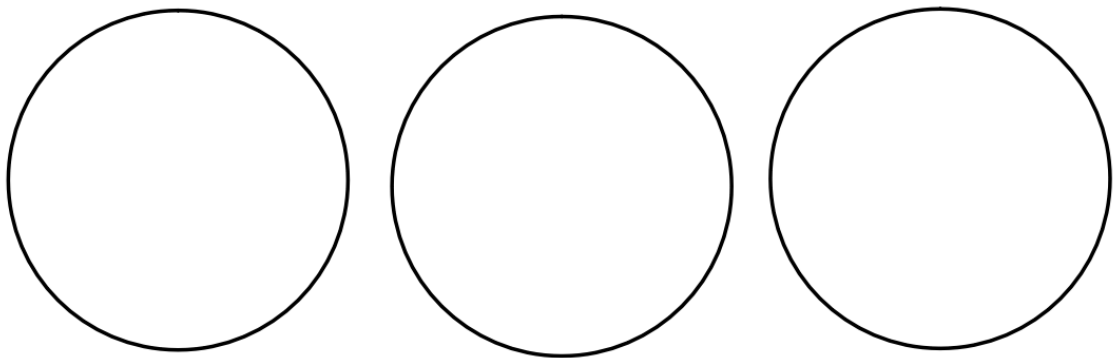

4 shared by 2 is

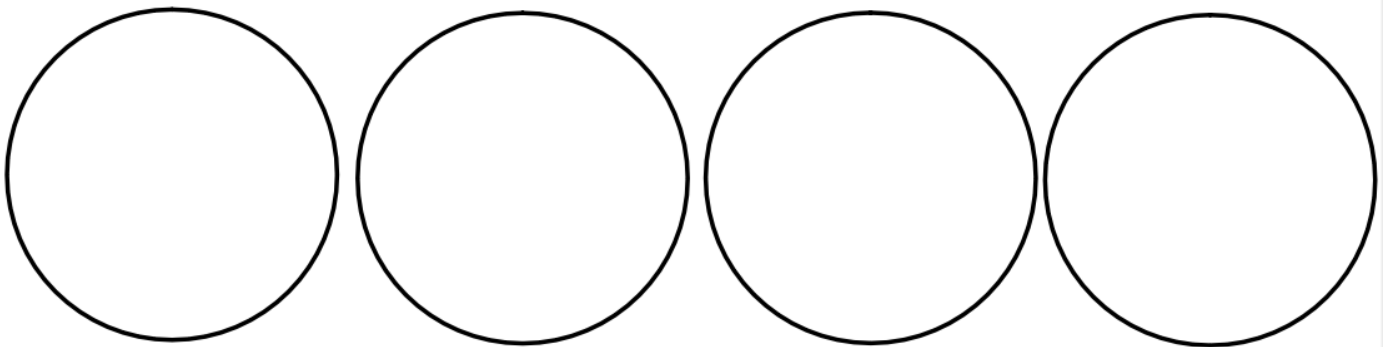

9 shared by 3 is

6 shared by 3 is

8 shared by 4 is

I have shared out the leaves for the brachiosauruses to eat.  
Have I done it correctly? Can you explain your answer to an adult and say why?
